Landscaping Information to Support Sematic Sub-Station Planning Application

Within this file there are two photographs, one showing the view from within the site looking across the access road to the estate showing the location of the proposed sub-station.

The second shows the view from the site access road into the site.

Where the sub-station is to be located the curb in the site car park would lowered to allow access into the sub-station should it be required, this will still allow the use of the current car parking spaces.

Once all civil works are completed the current foliage that is in the area would be be returned to the existing condition and any new planting carried out to to tie the sub-station into the surrounding area. This would be most important to the front of the site so that view from outside the site remained basically as it is now.

This would be carried out with mature plantings so as to tie in with existing foliage.
