## 1.0 Introduction

Geo<sup>2</sup> Remediation Limited were commissioned by ADP Architecture and Design on behalf of Beecroft & Price Properties & Ecogise Properties Ltd to conduct a Phase 1 Preliminary Risk Assessment of a site located at:

Land to Rear of 32 Queens Road,  
Barnsley  
S71 1AR

The site is approximately 0.12 hectares in area and located at grid reference 434900, 406470.

The study was undertaken prior to proposed redevelopment of the site for residential use. Existing and proposed development plans for the site can be referred to within Appendix A.

### 1.1 Scope of Works

The Preliminary Risk Assessment, consisting of a desk study, was conducted in order to assess the potential for contaminant sources to be present on site, resulting from the past use of the site and current land use.

The desk study was also undertaken to identify possible sensitive environmental receptors that may be at risk from sources, if present on site, within the locality of the site.

The scope of the Preliminary Risk Assessment has given consideration to guidance on Land Contamination: Risk Management pages of the GOV.UK web pages, the relevant requirements of the National Planning Policy Framework (NPPF) (as revised 2023) (paragraphs 180 & 189-191) and the Planning Practice Guidance (Land Affected by Contamination).

### 1.2 Site-Specific Constraints

A site walkover has not been undertaken at the time of writing this report.

## 2.0 Description of the Site and Surroundings

### 2.1 Site Description

The site is located approx. 200m southeast of Barnsley town centre. Figures 1 and 2 in Appendix A show the location of the site.

The site is currently an undeveloped parcel of land.

The area shown within the red site boundary on Figure A below, will be referred to throughout this document as 'the site'.

The site is located north of Queens Road by the Harborough Hill Rd Junction and is currently accessed by one ingress/egress point located behind Number 32, Queens Road.

**Figure A:** Site Location Plan. Red is approximate site boundary and pink are 50m and 100m buffers. Extract from Envirocheck report (Appendix B).

### 2.2 Surfacing

Surfacing across the site is understood to comprise gravel and made ground, with overgrown vegetation throughout.

## 2.3 Site Surroundings

The site is located to the east of Barnsley town centre, in South Yorkshire. The nearest residential properties are situated directly north and south of the site. The surrounding land uses of the site are summarised in Table 1.

Direction	Land Use
North	Residential property
East	Access road, leading to Queens Rd Academy, with elderly day care centre beyond
South	Residential property, with Queens Rd beyond.
West	9nr. lock-up garages, with Harborough Rd (A61) beyond

**Table 1.** Land Uses in the Surrounding Area.

### 3.0 Desk Study

#### 3.1 Desk Study Data

Information regarding the environmental setting of the site was obtained from the Envirocheck report, which collated information from a variety of sources. A copy of the Envirocheck report is presented in Appendix B.

Where indicated in Table 2 below, the data from the Envirocheck report has been supplemented with additional information obtained from freely available online data.

<b>Site Geology</b>	<p>British Geological Survey (BGS) data indicates that bedrock consists of Pennine Middle Coal Formation and Woolley Edge Rock.</p> <p>Superficial deposits are not recorded in the BGS records.</p> <p>BGS borehole logs found within 500m of the site indicate the presence of mudstone, sandstone and shale bedrock. The nearest BGS borehole located about 130m southeast recorded shale bedrock from approx. 21m bgl.</p> <p>The Envirocheck report shows the site has the following risk ratings associated with these ground stability hazards:</p> <ul style="list-style-type: none"> <li>• Collapsible ground stability – very low risk.</li> <li>• Compressible ground stability – no hazard.</li> <li>• Ground dissolution – no hazard.</li> <li>• Landslide ground stability hazard – very low risk.</li> <li>• Running sands stability hazard – no hazard.</li> <li>• Shrinking or swelling clay stability hazard – no hazard.</li> </ul>
<b>Mining</b>	<p>There are 13 BGS Recorded Mineral Sites within 1,000m of the site, the closest of which was an opencast sandstone quarry 370m southeast, now ceased operating.</p> <p>The site is located in a coal mining reporting area, with a review of the Coal Authority online interactive mapping indicating that the site is within a Development High Risk Area (DHRA), with mine shafts and potential shallow coal mining within 100m. A Coal Mining Risk Assessment (CMRA) report is therefore recommended</p>
<b>Radon</b>	<p>The site is in an intermediate probability radon area (less than 1 to 3% of homes are estimated to be at or above the Action Level). As such, no radon protective measures are necessary in the construction of new dwellings or extensions.</p>
<b>Site Hydrogeology</b>	<p>The bedrock is classified as a Secondary Aquifer A - comprising permeable layers that can support local water supplies and may form an important source of base flow to rivers.</p> <p>The site is not located within a Source Protection Zone.</p> <p>There are no potable groundwater abstraction points within 1,000m of the site.</p> <p>The groundwater beneath the site in the secondary bedrock aquifer has been classed as medium vulnerability.</p>

<b>Site Hydrology</b>	<p>The nearest water feature is Sough Dike, a culverted water course located 186m southwest of the site, flowing east.</p> <p>The River Dearne, located 734m northeast of the site, and has a Grade D water quality (2009).</p> <p>One pollution incident to water was registered in December 2022, 659m northeast of the site, with a category 2 water impact – significant incident. No impact was recorded to air or land.</p> <p>The nearest discharge consent is located 189m southwest, effective from May 1963 and related to storm overflow sewerage discharges.</p>
<b>Waste and Infilled Land</b>	<p>Three licensed waste management facilities are recorded within 1,000m of the site, the closest of which was a transfer station located 177m northwest, operational from the years 1992 to 1999.</p> <p>There are 13 historical landfills, operational landfills or waste management sites within 1km of the site, the closest of which is located 431m south.</p>
<b>Unexploded Ordnance (UXO)</b>	<p>A review of Zetica online risk mapping for the area indicates the site is located in a Low-risk area with respect to UXO.</p>

**Table 2.** Environmental Assessment of the Site.

### 3.2 Historic Planning Applications

A review of Barnsley Metropolitan Borough Council planning portal has shown that planning permission has previously been obtained for the site, summarised in Table 3 below.

Planning Ref.	Year	Details
2009/0627	2009	Demolition of 12No. small brick built disused industrial units and the erection of a 2.45m high security fence and gates.
2012/0747	2012	Planning permission for the erection of a Church and Community Centre with associated parking and landscaping works. Permission approved with conditions.

**Table 3.** Summary of Pertinent Planning Applications on Site.

At present day, the site appears to be free from buildings, indicating some demolition phases in the past.

## 4.0 Site History

Details regarding the development of the site, its immediate surroundings and potentially contaminative land uses were obtained from a review of historical maps.

Copies of the maps are provided in Appendix B and a detailed summary provided in Table 4 below. All distances given are approximate and are relative to the site, unless otherwise stated.

Date	On-Site	Off-Site	Potential Contamination
1852 – 1892	The site is an undeveloped parcel of land, bordering with a road leading to Piper's Cottage to the east.	The surrounding area is mostly undeveloped, especially to the east. Barnsley town with railroad and train station, residential dwellings and gas works can be found to the west/southwest.	N/A
1892 – 1893	The site is a predominantly undeveloped field with unknown buildings on its southern side.	The surrounding land use comprises agricultural land and residential developments. A disused colliery is located about 250m southeast.	N/A
1893 – 1931	The site is developed with a number of buildings, unknown if residential or industrial.	By 1931, the surrounding area is further developed with residential dwellings, allotment gardens and a Colliery 100m to the northeast.	Made ground from construction of buildings on site.
1931 – 1991	One more building is developed in the northeastern corner. The remainder of the site is unchanged. Unspecified Works labelled on site from 1961-1962.	By the 1970s Harborough Hill Rd is expanded, and a large junction is constructed southwest of the site. Barnsley town is expanding with more residential and industrial developments. Car parks are built east to the site and to the northeast.	Made ground from construction of buildings on site, potential works on site.
1991 – 2009	No change.	Sports centre is built about 200m northeast of the site. Train station is expanded.	N/A
2009 – 2024	Buildings on site have been demolished in 2009, and metal fence is erected on its western border.	Queens Road Academy is built directly northeast of the site.	Made ground from demolition of buildings on site.

**Table 4.** Detailed Summary Review of Historical Mapping

Table 5 below provides a brief summary of the historical land use on site and local to the site.

<b>Key Historical Activities</b>	
<b>On-Site</b>	Undeveloped / agricultural land with some buildings in the southern area before further developments in the 1930s, where industrial and residential properties fill the site. Demolition of all buildings on site happened in 2009, and site is undeveloped with overgrown vegetation since then.
<b>Off-Site</b>	Principally undeveloped / agricultural land use just outside Barnsley town centre up to the 1930s, then increasing construction of industries and residential properties around site. Terraced residential houses are constructed in the 1960s directly north of the site, and Harborough Hill Rd junction has been constructed to the southwest. Sports centre and Queens Rd Academy are built east and northeast of the site in the 1990s and 2010 respectively.

**Table 5.** Brief Summary of Historical Land Use On-Site and Off-Site.

## 5.0 Preliminary Risk Assessment

### 5.1 Source – Pathway – Receptor

UK legislation and guidance on assessing potentially contaminated land recommends the use of a risk assessment process based on a review of source/pathway/receptor relationships for various environmental media. The first stage of any risk assessment is to identify, using the desk study data and site information, the presence and extent of any hazard at the site, theoretical or demonstrable.

A key component of the overall risk assessment process is identification of “significant contaminant linkages” between contaminants and receptors. This can be accomplished through development of a site-specific conceptual model in which the potential contaminants, pathways and receptors identified on-site are described.

Each element can be defined as follows:

- **Contaminant source:** A substance either on or under the land and which has the potential to cause harm or pollution to human or environmental receptors.
- **Pathway:** A route or means by which a receptor can be exposed to or affected by a source.
- **Receptor:** A living organism or an ecological system, or controlled water, or property including buildings, crops and livestock.

The presence of all three of the above elements identifies a contamination linkage and a potentially unacceptable risk. To ensure that any risk present to, or, from the site can be appropriately managed each of these contamination linkages will be targeted by the investigation.

### 5.2 Hazard Identification

#### 5.2.1 Potential On-Site Sources

Potentially contaminative on-site activities relate to the historical industrial use of part of the area as unspecified small-scale works, as well as made ground originated from demolition of the buildings on site. Furthermore, the presence of underground shallow coal seams could pose a risk for future site users.

Due to the age of the buildings on site, it is likely that asbestos materials were used in the construction of the buildings, leading to a potential for asbestos in shallow Made Ground soils.

#### 5.2.2 Potential Off-Site Sources

No off-site sources of contamination have been identified within close proximity to the site.

A colliery was located about 150m northeast of the site, but it ceased operations before the 1960s. Due to the distance from the site, its date of closure and the present use of the land within Queens Rd Academy, it is considered to pose no risk to the site.

### **5.3 Initial Conceptual Site Model**

Contamination linkages arise as a result of the interconnection of the contaminant source, contamination pathways and potential receptors. These contamination linkages are used to design the site investigation (if required), guiding the type of investigation, location of exploratory boreholes and the required sample analysis.

### **5.4 Risk Estimation**

The objective of the qualitative risk assessment is to determine the significance of the risk, if any, which may occur as a result of the creation of pollutant linkages, which connect a potential receptor to an identified potential contaminant source at the site.

The perceived risk is based on a consideration of both the likelihood of an event (probability) occurring, and the severity of the potential consequence. Classification of these two factors is detailed in Appendix C.

### **5.5 Qualitative Risk Assessment**

A qualitative risk assessment is undertaken, detailed in Table 6 on the following pages, in line with guidance provided in CIRIA's Contaminated Land Risk Assessment: a guide to good practice CIRIA C552, 2001. The purpose of this assessment is to determine the relative significance of the identified contamination linkages by assessing the probability of an impact occurring and by assessing the perceived severity of an impact to a receptor.

Those linkages considered of low risk or less on the basis of the available site data will not be considered any further in this assessment. Linkages considered to be more significant are identified as presenting potentially unacceptable risk to the identified receptor. In these instances, further works may be considered necessary.

Source(s)	Pathway(s)	Receptor(s)	Comments	Risk	Requires Investigation
<p>Potential contamination (e.g. heavy metals, hydrocarbons) associated with the presence of small industrial workshops and private garages on site.</p> <p>No asbestos register has been obtained; the pre-2000 development of the site makes asbestos presence in building fabrics and border walls possible.</p> <p>Demolition of buildings in 2009 makes asbestos and industrial contamination in</p>	Leaching to groundwater, lateral and vertical flow, followed by migration within the aquifer	Surface water such as River Dearne, 734m northeast flowing east. (controlled waters)	Likely low permeability mudstone deposits but taking into account the distance to the nearest surface water receptor.	<b>Very Low</b> (Unlikely x Mild)	<b>No</b>
		Secondary Aquifer A, the site is not located within a Source Protection Zone.  There are no potable groundwater abstraction points within 1000m of the site. (controlled waters)	Any small leaks or spills are considered to have remained localised, with migration limited by the likelihood of low permeability mudstone overlying the Pennine Middle Coal Formation and Woolley Edge Rock.	<b>Low</b> (Unlikely x Medium)	<b>Yes</b>
	Exposure to harmful vapours and tainting of water supply	Proposed residential site end users. (human health)	Limited historical industrial land use of the site, unknown nature of the workshops and potential coal deposits.	<b>Low / Moderate</b> (Low Likelihood x Medium)	<b>Yes</b>
		Neighbouring residential site users, principally within enclosed spaces. (human health)	Taking into account that the nearest residential properties are directly north and south of the site.	<b>Low / Moderate</b> (Low Likelihood x Medium)	<b>Yes</b>
	Direct contact, inhalation and ingestion	Proposed residential site end users, principally within landscaped areas. (human health)	Limited historical industrial land use of the site but Made Ground soils are anticipated across the site and asbestos may be present within shallow soils due to historic building practises.	<b>Moderate</b> (Likely x Medium)	<b>Yes</b>

Source(s)	Pathway(s)	Receptor(s)	Comments	Risk	Requires Investigation
made ground possible.		Construction workers. (human health)	Construction workers excavating the ground may be exposed to potential contaminants. Short term risk would be mitigated by use of appropriate person protection equipment (PPE) and provision of suitable welfare facilities.	<b>Low</b> (Unlikely x Medium)	<b>No</b>
Hazardous ground gases arising from shallow Coal Seams and Made Ground soils.	Inhalation noxious ground gases	Proposed residential site end users, principally within enclosed spaces. (human health)	Shallow coal seams are suspected to be found on site.	<b>Moderate</b> (Likely x Medium)	<b>Yes</b>
Offsite sources	Migration of contaminants	Proposed residential site end users. (human health)	Given minimal industrial use of the surrounding area and distance to potential sources the risk is considered to be low.	<b>Low</b> (Unlikely x Medium)	<b>No</b>
		Groundwater beneath site		<b>Low</b> (Unlikely x Medium)	<b>No</b>

Table 6. Summary of Qualitative Risk Assessment

## 6.0 Conclusions and Recommendations

### 6.1 Conclusions

A Phase 1 Preliminary Risk Assessment of the site known as Land to Rear of 32 Queens Road,, located at Barnsley S71 1AR was undertaken, prior to proposed redevelopment of the site for residential use.

The purpose of the assessment was to evaluate the potential for risk to be posed to human health and controlled waters from historical and current use of the site.

The historical activities as small industrial workshops may have resulted in the site containing a variable thickness of Made Ground that may contain contamination or ACM fragments.

The site is underlain by Pennine Middle Coal Measures Formation, and the bedrock aquifer is classed as a Secondary Aquifer A. The site is not located in a Source Protection Zone, and there are no potable abstraction points within 1,000m. Consequently, Geo<sup>2</sup> consider the risk to the underlying Aquifer to be **Low**.

Due to the anticipated presence of made ground soils across the site and the historic industrial workshops present on site, Geo<sup>2</sup> consider the risk to residential end users from contaminants within shallow soils to be **Moderate**.

The risk to surface waters from contamination arising from the site is assessed as **Very Low** due to the distance to the closest river.

Due to the anticipated presence of shallow coal seams, but the likely absence of shafts or mine works in the area, the risk to site end users from hazardous ground gases has been assessed as **Moderate**.

### 6.2 Recommendations

The following measures are recommended to address the identified risks and to assist in satisfying anticipated contaminated land planning conditions:

- Based on the identified potential sources and risk assessment an intrusive investigation is required to confirm the potential contaminant linkages. This will refine the ground model and provide information on the soil and ground gas risks at the site.
- As the site is located within a Development High Risk Area, it is recommended that a Coal Mining Risk Assessment (CMRA) report is undertaken for the site.
- As new buildings are to be constructed on site and the site is within a coal area, it is recommended ground gas monitoring to be undertaken as part of a ground investigation.
- When development works take place on site, a watching brief should be imposed to ensure that any impacts unidentified in the site investigation can be characterised and treated

appropriately. Any unidentified contaminated material should be considered in the event of a redevelopment as costs for offsite disposal of these materials may be significant.

## 7.0 Report Limitations

This Report was prepared by Geo<sup>2</sup> for the sole and exclusive use of the Client and for the specific purpose for which Geo<sup>2</sup> was instructed. Unless explicitly agreed otherwise, in writing, this Report has been prepared under Geo<sup>2</sup>'s Standard Terms and Conditions.

Geo<sup>2</sup> does not intend, without its written consent through a formal letter of reliance or warranty, for this Report to be disseminated to any party other than the named Client or to be used or relied upon by any party other than the named Client. Use of the Report by any other party is unauthorised and such use is at the sole risk of the user. Any party using or relying upon this Report, other than the Client, agrees by virtue of its use to indemnify and hold harmless Geo<sup>2</sup> from and against all claims, losses and damages (of whatsoever nature and howsoever or whensoever arising), arising out of or resulting from the performance of the work by Geo<sup>2</sup>.

The recommendations contained within this Report represent Geo<sup>2</sup>'s professional opinions, based upon the information detailed within the Report, exercising the reasonable skill and care to be expected of a professional consultant holding itself out as having the competence, experience, and resources necessary for the purpose of carrying out similar work in scope and character to the services performed. The Report needs to be considered in the light of the proposal and associated limitations of scope. The Report needs to be read and considered in full and isolated sections cannot be used without full reference to other elements of the Report and any previous works referenced within the Report.

## Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

## Report Version v53.0

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
<b>Agency &amp; Hydrological</b>					
BGS Groundwater Flooding Susceptibility	pg 1	Yes	Yes	Yes	n/a
Contaminated Land Register Entries and Notices					
Discharge Consents	pg 2		4	18	54
Prosecutions Relating to Controlled Waters			n/a	n/a	n/a
Enforcement and Prohibition Notices					
Integrated Pollution Controls					
Integrated Pollution Prevention And Control	pg 21				2
Local Authority Integrated Pollution Prevention And Control					
Local Authority Pollution Prevention and Controls	pg 22			4	8
Local Authority Pollution Prevention and Control Enforcements					
Nearest Surface Water Feature	pg 24		Yes		
Pollution Incidents to Controlled Waters	pg 24		1		13
Prosecutions Relating to Authorised Processes					
Registered Radioactive Substances					
River Quality	pg 26				2
River Quality Biology Sampling Points					
River Quality Chemistry Sampling Points	pg 27				1
Substantiated Pollution Incident Register	pg 27				1
Water Abstractions	pg 28			1	7 (*9)
Water Industry Act Referrals					
Groundwater Vulnerability Map	pg 32	Yes	n/a	n/a	n/a
Groundwater Vulnerability - Soluble Rock Risk			n/a	n/a	n/a
Groundwater Vulnerability - Local Information			n/a	n/a	n/a
Bedrock Aquifer Designations	pg 32	Yes	n/a	n/a	n/a
Superficial Aquifer Designations			n/a	n/a	n/a
Source Protection Zones					
Extreme Flooding from Rivers or Sea without Defences				n/a	n/a
Flooding from Rivers or Sea without Defences				n/a	n/a
Areas Benefiting from Flood Defences				n/a	n/a
Flood Water Storage Areas				n/a	n/a
Flood Defences				n/a	n/a
OS Water Network Lines	pg 32		1	1	29

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
<b>Waste</b>					
BGS Recorded Landfill Sites					
Historical Landfill Sites	pg 37			1	12
Integrated Pollution Control Registered Waste Sites					
Licensed Waste Management Facilities (Landfill Boundaries)					
Licensed Waste Management Facilities (Locations)	pg 39		1		2
Local Authority Landfill Coverage	pg 40	1	n/a	n/a	n/a
Local Authority Recorded Landfill Sites	pg 40				6
Potentially Infilled Land (Non-Water)	pg 41		2	3	9
Potentially Infilled Land (Water)	pg 42			7	24
Registered Landfill Sites	pg 44			1	4
Registered Waste Transfer Sites	pg 45		2		2
Registered Waste Treatment or Disposal Sites					
<b>Hazardous Substances</b>					
Control of Major Accident Hazards Sites (COMAH)	pg 47				2
Explosive Sites					
Notification of Installations Handling Hazardous Substances (NIHHS)	pg 47				1
Planning Hazardous Substance Consents	pg 47				2
Planning Hazardous Substance Enforcements					

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
<b>Geological</b>					
BGS 1:625,000 Solid Geology	pg 48	Yes	n/a	n/a	n/a
BGS Estimated Soil Chemistry	pg 48	Yes	Yes	Yes	Yes
BGS Recorded Mineral Sites	pg 51			5	8
BGS Urban Soil Chemistry					
BGS Urban Soil Chemistry Averages					
CBSCB Compensation District			n/a	n/a	n/a
Coal Mining Affected Areas	pg 53	Yes	n/a	n/a	n/a
Mining Instability	pg 53	Yes	n/a	n/a	n/a
Man-Made Mining Cavities					
Natural Cavities					
Non Coal Mining Areas of Great Britain	pg 53	Yes	Yes	n/a	n/a
Potential for Collapsible Ground Stability Hazards	pg 54	Yes	Yes	n/a	n/a
Potential for Compressible Ground Stability Hazards	pg 54		Yes	n/a	n/a
Potential for Ground Dissolution Stability Hazards				n/a	n/a
Potential for Landslide Ground Stability Hazards	pg 54	Yes	Yes	n/a	n/a
Potential for Running Sand Ground Stability Hazards	pg 54		Yes	n/a	n/a
Potential for Shrinking or Swelling Clay Ground Stability Hazards	pg 54	Yes	Yes	n/a	n/a
Radon Potential - Radon Affected Areas	pg 55	Yes	n/a	n/a	n/a
Radon Potential - Radon Protection Measures			n/a	n/a	n/a
<b>Industrial Land Use</b>					
Contemporary Trade Directory Entries	pg 56		8	88	179
Fuel Station Entries	pg 80			1	5
Points of Interest - Commercial Services	pg 80		4	23	63
Points of Interest - Education and Health	pg 88				1
Points of Interest - Manufacturing and Production	pg 88		5	14	51
Points of Interest - Public Infrastructure	pg 94		4	4	20
Points of Interest - Recreational and Environmental	pg 96				9
Gas Pipelines					
Underground Electrical Cables					

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
<b>Sensitive Land Use</b>					
Ancient Woodland					
Areas of Adopted Green Belt	pg 98				1
Areas of Unadopted Green Belt					
Areas of Outstanding Natural Beauty					
Environmentally Sensitive Areas					
Forest Parks					
Local Nature Reserves	pg 98				1
Marine Nature Reserves					
National Nature Reserves					
National Parks					
Nitrate Sensitive Areas					
Nitrate Vulnerable Zones	pg 98	1			
Ramsar Sites					
Sites of Special Scientific Interest					
Special Areas of Conservation					
Special Protection Areas					
World Heritage Sites

## Geology 1:50,000 Maps

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps.

The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

## Geology 1:50,000 Maps Coverage

### Artificial Ground and Landslip

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often associated with potentially contaminated material, unpredictable engineering conditions and unstable ground.

Artificial ground includes:

- Made ground - man-made deposits such as embankments and spoil heaps on the natural ground surface.
- Worked ground - areas where the ground has been cut away such as quarries and road cuttings.
- Infilled ground - areas where the ground has been cut away then wholly or partially backfilled.
- Landscaped ground - areas where the surface has been reshaped.
- Disturbed ground - areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes foundered strata, where the ground has collapsed due to subsidence.

### Bedrock and Faults

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

### Combined Surface Geology

The Combined Surface Geology map combines all the previous maps into one combined geological overview of your site.

Please consult the legends to the previous maps to interpret the Combined "Surface Geology" map.

### Additional Information

More information on 1:50,000 Geological mapping and explanations of rock classifications can be found on the BGS website. Using the LEX Codes in this report, further descriptions of rock types can be obtained by interrogating the 'BGS Lexicon of Named Rock Units'. This database can be accessed by following the 'Information and Data' link on the BGS website.

Yorkshire

Published 1852

Source map scale - 1:1,056

The 1:1056 scale of Ordnance Survey mapping was adopted from Ireland in 1848 and was used to survey towns with a population of over 4000, plus county towns of lesser population, in those counties mapped at the six-inch scale in 1841-55. The scale was the largest scale at which London was mapped by the Ordnance Survey and a 'skeleton' survey of the capital, showing little more than streets, street names, frontages and altitudes, was undertaken between 1848 and 1850. The majority of the 1:1056 surveys were later replaced by 1:500 surveys; although almost all the remainder were revised at this scale, sometimes more than once before 1895. The type of detail shown on the 1:1056 scale is broadly similar to that on 1:500; the apparent omission of minor details such as sewer access points and street lights may be as much a reflection of the generally earlier date of these plans, as of the specification of the map.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

Map Name(s) and Date(s)

Yorkshire

Published 1889

Source map scale - 1:500

The 1:500 scale Ordnance Survey mapping was introduced in 1855 as a replacement for the 1:528 scale and to compliment the 1:2500 scale that had been implemented in 1853. By 1895, the 1:500 scale covered most towns over a population of about 4000 at the time of survey, although very few towns were mapped more than once at this scale, and none have been since 1910. The 1:500 scale gives particular emphasis to such features as lamp posts, man holes, arched passages and minor building projections. Also often featured are divisions between tenements, interior ground floor layouts of public buildings, and on earlier plans, the functions of the various parts of larger industrial premises are also indicated. Content of the plans does vary however, from one town to the next in terms of, for example, the completeness of railway tracks and the coverage of public buildings.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

**Yorkshire**  
**Published 1892 - 1893**  
**Source map scale - 1:2,500**

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

## Supply of Unpublished Survey Information

Published 1975

Source map scale - 1:1,250

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a 'work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

## Large-Scale National Grid Data

Published 1993

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

## Large-Scale National Grid Data

Published 1993

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

# Historical Mapping Legends

## Ordnance Survey County Series 1:10,560

	Gravel Pit		Sand Pit		Other Pits
	Quarry		Shingle		Orchard
	Osiers		Reeds		Marsh
	Mixed Wood		Deciduous		Brushwood
	Fir		Furze		Rough Pasture
	Arrow denotes flow of water		Trigonometrical Station		
	Site of Antiquities		Bench Mark		
	Pump, Guide Post, Signal Post		Well, Spring, Boundary Post		
	<b>-285</b> Surface Level				
	Sketched Contour		Instrumental Contour		
	Main Roads		Minor Roads		
	Sunken Road		Raised Road		
	Road over Railway		Railway over River		
	Railway over Road		Level Crossing		
	Road over River or Canal		Road over Stream		
	Road over Stream				
	County Boundary (Geographical)				
	County & Civil Parish Boundary				
	Administrative County & Civil Parish Boundary				
	County Borough Boundary (England)				
	County Burgh Boundary (Scotland)				
	Rural District Boundary				
	Civil Parish Boundary				

## Ordnance Survey Plan 1:10,000

	Chalk Pit, Clay Pit or Quarry		Gravel Pit
	Sand Pit		Disused Pit or Quarry
	Refuse or Slag Heap		Lake, Loch or Pond
	Dunes		Boulders
	Coniferous Trees		Non-Coniferous Trees
	Orchard		Scrub
	Coppice		
	Bracken		Heath
	Rough Grassland		
	Marsh		Reeds
	Saltings		
	Building		Glasshouse
	Sloping Masonry		Pylon
	Electricity Transmission Line		Pole
	Cutting		Embankment
	Standard Gauge Multiple Track		
	Standard Gauge Single Track		
	Siding, Tramway or Mineral Line		
	Narrow Gauge		
	Geographical County		
	Administrative County, County Borough or County of City		
	Municipal Borough, Urban or Rural District, Burgh or District Council		
	Borough, Burgh or County Constituency Shown only when not coincident with other boundaries		
	Civil Parish Shown alternately when coincidence of boundaries occurs		
	BP, BS Boundary Post or Stone		Pol Sta Police Station
	Ch Church		PO Post Office
	CH Club House		PC Public Convenience
	F E Sta Fire Engine Station		PH Public House
	FB Foot Bridge		SB Signal Box
	Fn Fountain		Spr Spring
	GP Guide Post		TCB Telephone Call Box
	MP Mile Post		TCP Telephone Call Post
	MS Mile Stone		W Well

## 1:10,000 Raster Mapping

	Gravel Pit		Refuse tip or slag heap
	Rock		Rock (scattered)
	Boulders		Boulders (scattered)
	Shingle		Mud
	Sand		Sand Pit
	Slopes		Top of cliff
	General detail		Underground detail
	Overhead detail		Narrow gauge railway
	Multi-track railway		Single track railway
	County boundary (England only)		Civil, parish or community boundary
	District, Unitary, Metropolitan, London Borough boundary		Constituency boundary
	Area of wooded vegetation		Non-coniferous trees
	Non-coniferous trees (scattered)		Coniferous trees
	Coniferous trees (scattered)		Positioned tree
	Orchard		Coppice or Osiers
	Rough Grassland		Heath
	Scrub		Marsh, Salt Marsh or Reeds
	Water feature		Flow arrows
	MHW(S) Mean high water (springs)		MLW(S) Mean low water (springs)
	Telephone line (where shown)		Electricity transmission line (with poles)
	Bench mark (where shown)		Triangulation station
	Point feature (e.g. Guide Post or Mile Stone)		Pylon, flare stack or lighting tower
	Site of (antiquity)		Glasshouse
	General Building		Important Building

Published 1855

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

**10k Raster Mapping**  
**Published 2000**  
**Source map scale - 1:10,000**

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

**VectorMap Local**  
**Published 2024**  
**Source map scale - 1:10,000**

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

**Appendix C – Risk Assessment Terminology**

## Definitions and Classifications of Risk Assessment Terminology.

### Probability

Probability can be defined as the chance of a particular event occurring in a given period of time.

Descriptions of each of the four qualitative terms to be use in this report to describe the perceived probability of any identified pollutant linkage becoming realised are shown below in Table W.

Term	Description
<b>High Likelihood</b>	There is pollutant linkage and an event would appear very likely in the short-term and almost inevitable over the long-term, or there is evidence at the receptor of harm or pollution.
<b>Likely</b>	There is pollutant linkage and all the elements are present and in the right place which means that it is probable that an event will occur. Circumstances are such that an event is not inevitable, but possible in the short-term and likely over the long-term.
<b>Low Likelihood</b>	There is pollutant linkage and circumstances are possible under which an event could occur. However, it is by no means certain that even over a long period such an event would take place, and is less likely in the shorter term.
<b>Unlikely</b>	There is pollutant linkage but circumstances are such that it is improbable that an event would occur even in the very long-term.

**Table W.** Description of Probability Classifications

## Severity

Severity (consequence) can be defined as the adverse effects (or harm) arising from a defined hazard, which impairs the quality of human health or the environment in the short or longer term.

Descriptions of each of the four qualitative terms to be use in this report to describe the perceived potential severity of any identified pollutant linkage becoming realised are shown below in Table X.

Term	Description
<b>Severe</b>	<p>Highly elevated concentrations <b>likely</b> to result in “significant harm” to human health as defined by the EPA 1990, Part 2A, if exposure occurs.</p> <p>Equivalent to <b>EA Category 1</b> pollution incident including persistent and/or extensive effects on water quality; leading to closure of a potable abstraction point; major impact on amenity value or major damage to agriculture or commerce.</p> <p>Major damage to aquatic or other ecosystems, which is likely to result in a substantial adverse change in its functioning or harm to a species of special interest that endangers the long-term maintenance of the population.</p> <p>Catastrophic damage to crops, buildings or property.</p>
<b>Medium</b>	<p>Elevated concentrations which could result in “significant harm” to human health as defined by the EPA 1990, Part 2A if exposure occurs.</p> <p>Equivalent to <b>EA Category 2</b> pollution incident including significant effect on water quality; notification required to abstractors; reduction in amenity value or significant damage to agriculture or commerce.</p> <p>Significant damage to aquatic or other ecosystems, which may result in a substantial adverse change in its functioning or harm to a species of special interest that may endanger the long-term maintenance of the population.</p> <p>Significant damage to crops, buildings or property.</p>
<b>Mild</b>	<p>Exposure to human health <b>unlikely</b> to lead to “significant harm”. Equivalent to <b>EA Category 3</b> pollution incident including minimal or short-lived effect on water quality; marginal effect on amenity value, agriculture or commerce.</p> <p>Minor or short-lived damage to aquatic or other ecosystems, which is unlikely to result in a substantial adverse change in its functioning or harm to a species of special interest that would endanger the long-term maintenance of the population.</p> <p>Minor damage to crops, buildings or property.</p>
<b>Minor</b>	<p>No measurable effect on humans.</p> <p>Equivalent to insubstantial pollution incident with no observed effect on water quality or ecosystems.</p> <p>Repairable effects of damage to buildings, structures and services.</p>

**Table X.** Description of Severity Classifications

Once the severity and probability of a pollutant linkage has been determined the risk can be assessed using the risk matrix shown overleaf on Table Y.

### Risk Matrix

By cross referencing the derived severity and probability in Table Y, below the perceived potential risk can be determined.

		Severity			
		Severe	Medium	Mild	Minor
Probability	High Likelihood	Very High Risk	High Risk	Moderate Risk	Moderate / Low Risk
	Likely	High Risk	Moderate Risk	Moderate / Low Risk	Low Risk
	Low Likelihood	Moderate Risk	Moderate / Low Risk	Low Risk	Very Low Risk
	Unlikely	Moderate / Low Risk	Low Risk	Very Low Risk	Very Low Risk

**Table Y.** Risk Assessment Matrix

The risk categories detailed above are defined below in the following Table Z.

Term	Description
<b>Very High Risk</b>	There is a high probability that significant harm could arise to a designated receptor from an identified hazard at the site without appropriate remedial action.
<b>High Risk</b>	Significant harm is likely to arise to a designated receptor from an identified hazard at the site without appropriate remedial action.
<b>Moderate Risk</b>	It is possible that without appropriate remedial action, harm could arise to a designated receptor but it is relatively unlikely that any such harm would be severe and if any harm were to occur, it is likely that such harm would be relatively mild.
<b>Low Risk</b>	It is possible that significant harm could arise to a designated receptor from an identified hazard but it is likely that at worst this harm if realised would normally be mild.
<b>Very Low Risk</b>	There is a low possibility that harm could arise to a receptor. In the event of such harm being realised, it is not likely to be severe.

**Table Z.** Definition of Risk
