

OVERVIEW

The Charging Network Open to Every EV Driver

MANUFACTURED IN THE UK

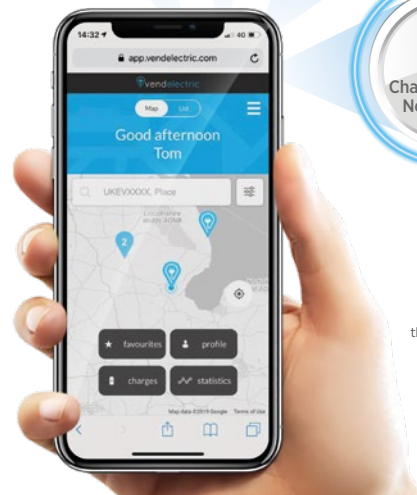

The EV Charging Network For All EV Drivers

Rolec EV/VendElectric electric vehicle charging points provide the ideal EV charging solution for every location. These charging points are easy to install, easy to use, easy to manage - and produce an instant revenue stream for your business.

For your customers, staff and visitors to charge their EV all you need is an electricity supply and a Rolec EV charging point, it's that easy.

- **NO** Driver Annual Membership Fees
- **NO** Driver Monthly Subscription Fees

Payment Clearance and Authorisation

- Charge Point Activity Report
- Charge Point Generated Funds Bank Transferred to Operator
- Benefit-in-Kind Feedback

Operator Management

EV DRIVER BENEFITS

VendElectric allows every EV driver to pull up to the charging point and, using their mobile phone and the charging app, simply pay on the spot for its use.

The main attraction for the EV driver is that they do not have to pay any costly and unnecessary charging network membership, subscription or connection fees.

The user simply pays for the charge advertised on the charging point or app using secure Sage Pay protected payment methods such as Visa, PayPal, Mastercard and American Express.

VENDELECTRIC APP

Features of the VendElectric App, which is free to download and use from the Apple App Store or Google Play, or can be used directly from the web, include:

- User friendly interface, allowing access to the entire VendElectric charge point network
- Charge point locator to help the EV driver navigate to the most convenient charge point
- Live, charge point status, displays the availability and status of charge points
- Sort and save charge points by favourites, size, tariff and location radius
- Full charging history
- Charge point booking feature – book a charge point in advance to ensure availability (feature coming soon, fees may apply)

BENEFITS TO YOUR BUSINESS

Easy to install, VendElectric only requires an electricity supply, ethernet connection or GPRS signal in order to be installed in any location.

The flexible design inherent in VendElectric allows your business to run anything from a single EV charge point upwards - and should you need it, optionally allows you to accommodate private network charging too (i.e. staff, members, etc).

In addition, the system's 'only pay for your charge' popularity with EV drivers presents your business with the opportunity to generate a higher value income stream than other systems on the market.

With VendElectric there are no hidden extras and you have complete visibility over activity history, etc. Management of your EV charge points is done via a user-friendly interface, which features key metrics and performance indicators. You will pay no licence fees and can set your own charging tariffs.

Along with real-time reporting there is even a fault notification feature should it be needed, and the VendElectric team provide full ongoing customer support.

VendElectric also incorporates an optional EV charge point electrical load management solution (fees apply), which is ideal for locations requiring multiple EV charging points where the charging points' collective load may be greater than the electricity supply available. The system ensures charging facilities are available, even for sites with a limited electricity infrastructure, by temporarily reducing EV charging capacity.

VendElectric is the ideal solution to suit all budgets and locations. It is available across the majority of Rolec EV's charging range.
