

Wheel washing

42 Park Avenue, Royston

D Noble Ltd are of the opinion that it is far better to eradicate the problem rather than putting cures in place, therefore all of our sites employ full high powered wheel washing facilities which mean the wagon drivers have to park on an apron prior to leaving site for their wagon wheels to be washed and then they are allowed back onto the main roads.

In the event that any mud or discolouration is found to be on the adjacent roads we will employ the services of our forklift which also has road sweeper attachments to ensure that the roads are kept in a clean and efficient manner, however we do not envisage this being a problem as we wash wheels prior to exiting of the site.
