

**PROPOSED HERITAGE MEMORIAL AT CANAL BASIN,  
WORSBROUGH COUNTRY PARK, WORSBROUGH BRIDGE, BARNSELEY**

The proposal is to be coloured as the sketch below (not to scale, see main drawing submitted), and is to feature the glass-blower and coal miner as depicted on Barnsley's traditional coat of arms.

It is proposed that the plinth is constructed in cast in-situ concrete and faced to the top and all elevations with Staffordshire Blue bricks (Staffordshire Blue Brindle Dragface by Ibstock). This is a colour of brick used extensively in the construction of the rail infrastructure in the area, one example being the railway viaduct spanning the River Dove valley at Swaithe on the main Barnsley to Sheffield railway line.

The plinth is to be capped using reconstructed sandstone copings to blend with the houses in the area and to make a clear definition between the plinth structure and coloured sculpture.
