

I wish to comment on my objection to the proposed planning of 2021/1090. We have been residences in this area for 34 years and moved here due to a health condition where we were advised to move to the country with less pollutants, your proposed development would exaggerate this condition and have a detrimental impact to me and my families health. Our home is situated backing onto a open space field which is teaming with wildlife and several habitats which helps the ecosystem and reduces impact of climate change. Your proposal will make climate change worse by increased energy fuels, traffic, and loss of wildlife. The trees and bushes help absorb the water in the area due to an underground stream, my daughter works in the property industry for RICS and she is concerned that same as has happened in previous areas of developments across the country that the area will become water logged and flood, if nature is replaced by development. Also concerned over potential rise in crime rates in the area due to the excessive amount of what you have termed 'affordable housing'
