

2026/0567 Description of Works

The tree has become overgrown over time on one side due to reduced growth on the opposite side because of adjacent trees. I would like to balance it out by reducing the crown on the overgrown side by 25% so that balanced growth is more likely in the future. I attach an additional photograph which shows some of the detail of the growth on the right hand side of the picture. This is the side which requires the 25% reduction.
