Please provide the following information:
- Tree species
- The number used on the sketch plan); and
- A description of the proposed works.

Where trees are protected by a Tree Preservation Order you must also provide:
- Reasons for the work; and where trees are being felled
- Proposals for planting replacement trees (including quantity, species, position and size) or reasons for not wanting to replant.

e.g. Oak (T3) - fell because of excessive shading and low amenity value. Replant with one standard ash in same position.

Common Ash - Removal of all branches to as close to the trunk as possible (Approximately 5m height remaining) or within a safe area to mitigate any potential damage to property, people etc. Retain the trunk if possible as habitat for potential bat nest site. The entire Trunk has rotted out and is completely hollow inside from the base to the intersection of the main branches, loose bark and rotten wood is presented throughout with several openings where you can see the extent of the damage.
Some twisting, irregular growth and bark/branch inclusions, few dead stubs.

Weeping Willow - Prune back the hazardous branches growing across access routes and or over property to within 2m of any building/boundaries, including the removal of hazardous dead wood. The crown is in good overall health however there are multiple dead branches and spread is encroaching over access routes, property boundaries and the building itself particularly the chimney breast. Unusual and twisted growth Is present and bark inclusions that are likely to harbour pathogens.
