DESIGN AND ACCESS STATEMENT REQUIREMENT

RE: The conversion of an existing public telephone kiosk & change of use to form a combined public payphone & ATM cash machine kiosk.
AT: O/S 64 Market Street , Barnsley S70 1SN

USE
Conversion of the existing telephone kiosk to form a combined public payphone and ATM cash machine. The conversion of the existing kiosk (please see accompanying drawings) places the payphone and proposed ATM on the outside of the proposed kiosk. The site has been identified within an area which has a high demand for ATM facilities.

AMOUNT
The existing kiosk sits on a 900 x 900 mm footprint and the combined new unit will occupy a footprint of 900 mm x 1012mm.

LAYOUT
The site selected for this application has had the following considerations taking into account:

- To ensure clear pavement access for people using either the payphone or ATM and at the same time allowing people to pass by without obstruction
- That people with vehicles using the facilities can park without causing an obstruction on the highway and affect the free flow of traffic and pedestrian safety.
- The ATM is placed, within reason, away from direct sunlight to reduce glare on the screen
- The introduction of an ATM machine will help to encourage people to withdraw cash to use within the surrounding area thereby supporting local businesses
- Community safety – each site is checked and approval sought from the local Police Crime Prevention Officer before submission in order to highlight any potential issues surrounding crime and safety.

SCALE
The housing fits well into the existing street scene and is compatible with existing buildings and structures. (Please see accompanying drawings relating to this).

LANDSCAPING
No landscaping treatments are relevant to the proposal. On completion of works all paving materials will be made good.

APPEARANCE
The design of the housing has been chosen to fit in and work with current payphone kiosks. It can sit alongside existing payphones and will not look out of place.
Our expertise in producing robust products to cope with extremities of weather and usage enables us to guarantee the product will still look good for many years to come.

ACCESS
Access for users of either the ATM or payphone will be improved. By placing the payphone and ATM on the outside of the unit at a height which is Part M or BS8300 compliant ensures free and easy access for all users .
