File number WT 0003

The trees in question are two "Willow" trees which are situated on the boundary of two land owners (the applicant and Cannon Hall Estate) Tree spread and root spread impinges on all surrounding area. The trees are subject to natural breakage and root ingress.

Currently the ingress amounts to garden root infestation, and critically building damage, ie house and out-buildings. Upon visual inspection this is obvious, with stone work and brick work cracks.

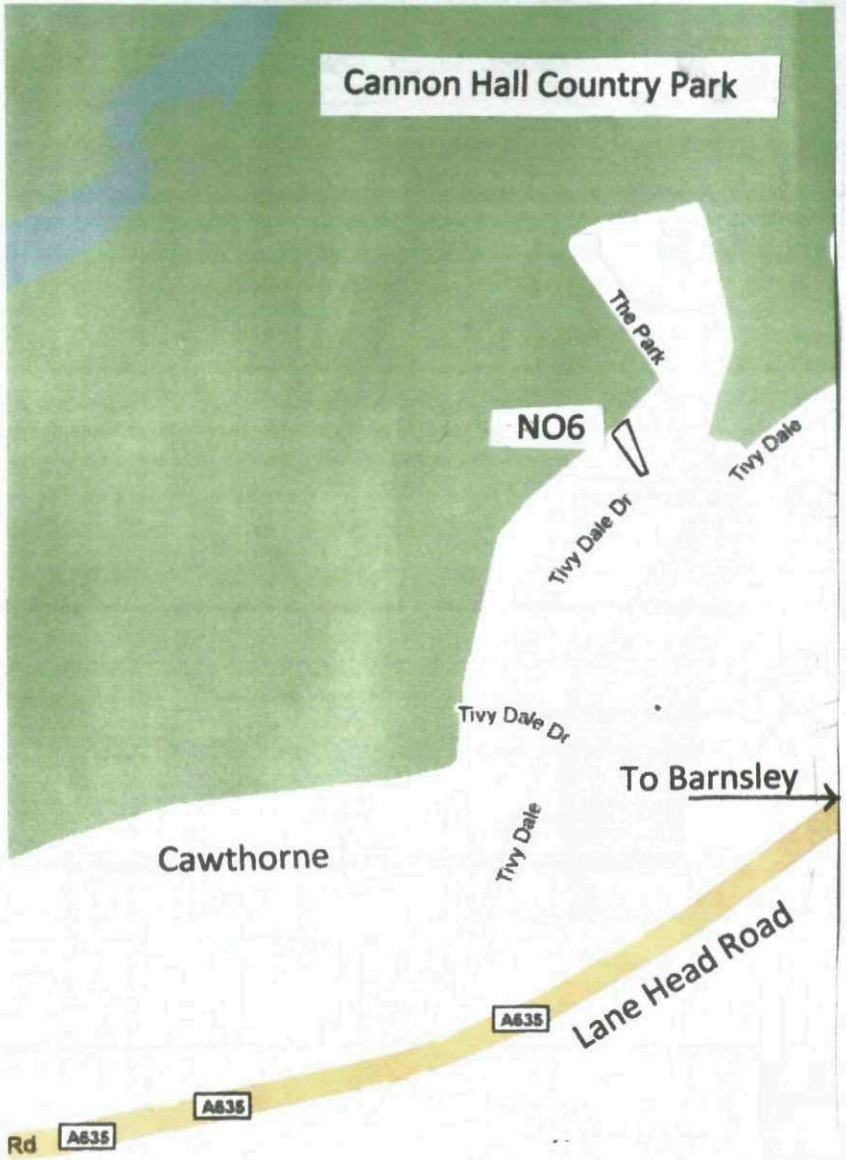

Currently there has been no spend on building repair but estimates indicate £10,000 plus should action not be taken.

The existing distance of trees to building is maximum ten metre, when the recommended plant distance of Willow to domestic property is Fifty Metre.

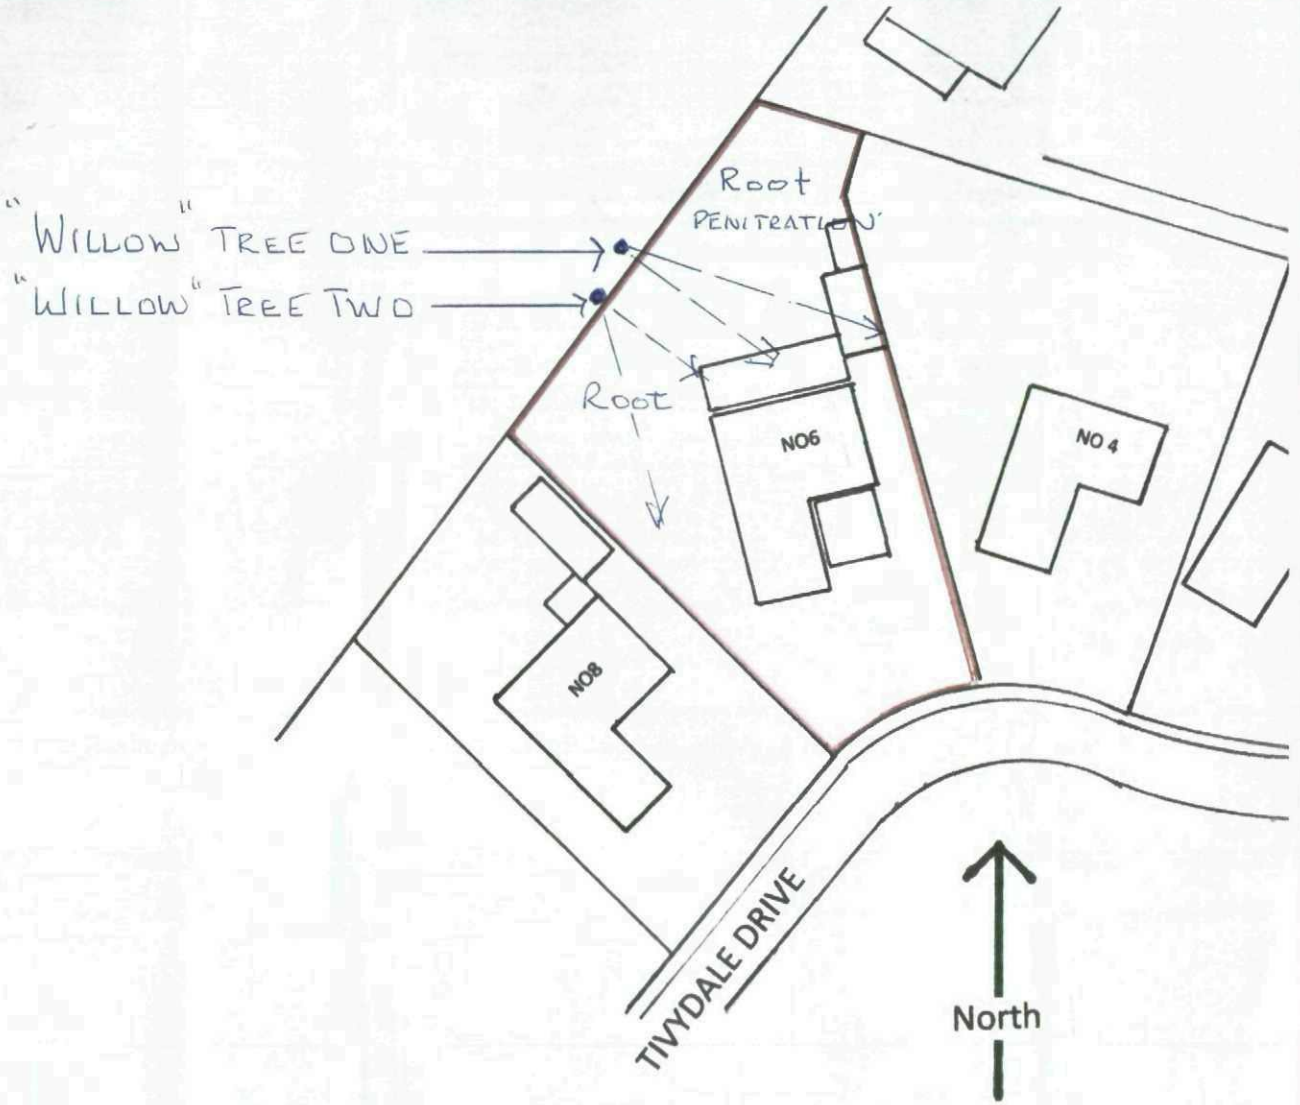

The two rouge trees in question are currently a major hazard to the surround domestic properties as such I wish to remove the trees permanently from the site in question, and the trees will be "logged" and removed from site for domestic fuel.

Application for tree works: Town and Country Planning Act 1990.
