LAND ADJACENT 15 EDWARD ROAD, GOLDTHORPE,S63 9AZ

PROVISION OF HIGH SPEED FULL FIBRE BROADBAND

Physical Infrastructure for High Speed Electronic Communications Network
Each building unit to have at least one network termination point. Suitable ducting to be provided to connect the network termination point to an appropriate access point. The access point to be located externally with a through-wall duct to connect it to the network termination point.
The design of in-building infrastructure is to take account of satellite and wireless technologies where there is evidence that the required network speeds could not be met.
