PROPOSED PLAYGROUND CANOPIES

DESIGN AND ACCESS STATEMENT

Statement of need

The current playground which is used during recreation time offers little protection from the weather; no shade in the sun or shelter in the rain and no real opportunity for our students to sit and be socially interactive as appropriate to their age range. The addition of a canopy to the playground would satisfy these needs and also relieve the pressure upon the existing accommodation during break/lunch periods when students cannot be outside due to the weather.

Appearance

The proposal is a steel framed Mono Pitch structure with a curved roof. The surface finish of the canopy posts will be zinc primed; polyester powder coated frames, RAL colour is to be confirmed. To be constructed on existing level tarmac playground.

The roof covering will be Opal 60 fire resistant fabric. This provides protection from UV rays whilst allowing maximum light penetration.

Please refer to 6568-PP-01 & 6569-PP-02

Run off from the roof will be collected in gutters at along the length of the building which are then routed to a down pipe located in each corner this will be connected into the existing drainage system.
